VIBEWAY

GREEN QUALITIES:

- 100% Recycled Crumb Rubber from Tires
- Recessed for Easy Guidance for Foot of Appliance
- Reduces Wear and Tear on Appliances
- Prevents Washing Machines from "Walking"
- Helps to Protect Floors

DESCRIPTION:

VibeAway™ Anti Vibration Pads are specially designed anti-vibration pads for washing machines and dryers as well as many other large appliances or tools such as freezers or table saws. These pads are made from 100% crumb rubber, recycled from tires, and effectively reduce the transfer of vibration that occurs in most typical washing and drying cycles.

This shock absorption pad reduces sound as well as the tendency for washer and dryers to move from their initial position (or "walk") during each cycle. These pads also reduce the need to reinforce upper level floors to reduce vibration and noise, making them very downstairs neighbor friendly. In addition, these pads help to reduce the natural wear and tear that occurs when these appliances experience prolonged vibration.

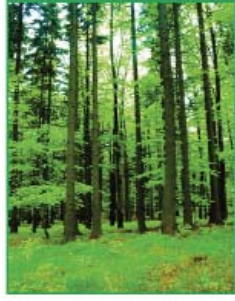

Made from 100% recycled tire rubber which helps to address important environmental concerns. How big is the problem of worn out tires? In 2003, the Rubber Manufacturers Association estimated that there were 275 million tires in stockpiles across the United States, and that approximately 290 million scrap tires are added each year.

FEATURES:

- Made from 100% Recycled Crumb Rubber from Tires
- Recessed for Easy Guidance
- Reduces Wear and Tear on Appliances
- Helps Protect Floor
- Prevents Washing Machine from "Walking"
- Reduces the Transfer of Vibration
- Full Refund Guarantee

INSTALLATION INSTRUCTIONS:

1. Make sure that the washing machine is level before installing pads.
2. Start with a clean, dry floor.
3. Lifting one side at a time, place pads under the feet of the washing machine. (Assistance may be needed lifting the machine.) Using two people is the recommended method.
4. Make sure that the feet of the machine fit securely in the recess of the pad.
5. Make sure that the pads do not move or spin under the feet. It may be necessary to adjust the feet slightly to hold the pads firmly to the floor.
6. Recheck level.

TGPC, Inc. assumes no responsibility for personal injury, mechanical or physical damage while installing or using the pads. Pads should be professionally installed. Not responsible for any discoloration of the floor that may occur. Will not help reduce vibration of severely unbalanced loads. These pads are intended to help reduce the transfer of vibration from washing machines and dryers and for no other use. TGPC, Inc. will not be responsible for pads that are used incorrectly or not for their intended use.

HELPFUL HINTS TO AVOID UNBALANCED LOADS:

- Use laundry detergent designed for front load washing machines.
- Sort clothes by type of fabric. Wash heavy fabrics with only heavy fabrics, and lighter fabrics with lighter fabrics. The weight difference between heavy and light fabrics when wet can cause an unbalance.
- Combine large and small items of the same fabric, loading larger items first. Larger items should not be more than half of the total load.
- If possible, wash only full loads. An empty space in the drum can also cause an unbalance.
- Most importantly, make sure the washing machine is level, and the leveling feet are locked in place. VibeAway™ pads work for all types of washing machines/dryers
