QUIETDOWNSM
ACOUSTIC UNDERLAY

Information

QuietDown® is a multi-purpose, high-performance acoustic underlay engineered from recycled rubber to reduce sound transmission through subfloors.

Specially Formulated for Your Flooring Type:

Available for a wide variety of flooring types such as ceramic tile/stone, engineered wood, hardwood, laminate, carpet and vinyl, QuietDown offers incredible sound-dampening qualities. Easy-to-install 4' x 3½' panels are thinner, lighter, and stronger than conventional underlays.

Proven Results:

Tests by the National Research Council show that QuietDown is effective at reducing mid- to high-frequency impact sounds beneath ceramic flooring, hardwood and laminates. For example, 1/8" QuietDown under hardwood achieves an IIC rating of 61. This means impact sounds such as speech, people walking in hard-soled shoes or dropped toys, pots, pans, etc. will be reduced.

Installs in a Flash:

QuietDown is perfect for do-it-yourselfers. Laying and trimming QuietDown is quick and easy. Installation techniques vary depending on your flooring type, read the [installation instructions](#) for more info.

Where to Use QuietDown:

QuietDown is perfect for condos, kitchens, playrooms, institutional settings, and anywhere else where noise transmission is a concern. QuietDown is available in 1/12", 1/8", 1/4", and 3/8" thicknesses to help achieve the sound transmission reduction needed for your project.

Green Material:

Like all products, QuietDown is engineered from recycled rubber – so every square foot you install means less landfill waste. For contractors, this means it contributes to the 'green content' in new construction.

Keeps working for years and years
QuietDown is made of masticated rubber that is fiber-reinforced and fully cured. This unique process translates into a stronger, more resilient acoustic underlay. QuietDown doesn't pack down or fall apart over time – it keeps on performing year after year.

Investing in New Flooring?

Installing QuietDown below your floor is far more durable and effective as a sound dampener than foam or fibrous underlay. The difference is remarkable.
