CLIMATE SEAL™ WINDOW INSERT

GREEN QUALITIES:

- Formaldehyde free
- Reduces energy costs
- Tremendous draft reduction
- Safer than glass and impact resistant
- Significant reduction in thermal loss

DESCRIPTION:

Problem windows can be found in about 80% of American homes and businesses. *The solution is Climate Seal, which protects against...*

COLD/HEAT INFILTRATION - NOISE - CONDENSATION - HIGH UTILITY BILLS - DUST AND POLLEN

Climate Seal is not a storm or prime replacement window. It's a magnetic Interior Insulating window that installs within or over the existing window cavity. Yet its performance rivals or exceeds prime replacement windows – for much less cost!

Climate Seal IS UNQUESTIONABLY THE MOST EFFECTIVE INTERIOR INSULATING WINDOW SYSTEM ON THE MARKET!

- Our acrylic glazing is clear and guaranteed against yellowing & clouding for 10 years; it is light in weight, yet, 17 times more impact resistant than glass of equal thickness; it is also safer and a much better insulator than glass.
- Our magnetic vinyl extrusion is strong; it is also light in weight & a much better insulator than aluminum; it will help prevent condensation and will not deteriorate from the sun's UV rays, as will moldings made from ABS plastic.

The most unique feature of Climate Seal is the "bellows" built into our molding; this allows the acrylic to expand in a flat plane without "bowing", therefore, the window will not "pop-off" due to sheet edge rotation.

INSTALLATION:

Locations for Installation:

SURFACE MOUNT (over) The Existing Window Cavity or

IN-JAMB MOUNT (within) The Existing Window Cavity

Climate Seal covers the existing window, creating a thermal barrier, the Climate Seal keeps heat in during winter and out during summer. It's made of vinyl & acrylic - superior insulating materials. Vinyl & acrylic don't conduct or lose heat nearly as fast as materials like aluminum and glass.

Climate Seal's magnetic seal is virtually airtight. By installing the Climate Seal over an existing window, an insulating dead-air space is created. This separates the warm inside air from cold prime window glass. And with our exclusive bellows design that expands or contracts as temperatures change, the seal is maintained and annoying drafts are eliminated. The flexible bellows also adjusts for installation of contoured moldings.
